

1. Product Overview

Electro absorption externally modulated laser (EML) is an integrated device of EAM and DFB laser. With the advantages of performance, cost and volume, the application field has been gradually extended to CATV optical transmission system in recent years, which is used to replace direct modulation optical transmitter and external modulation optical transmitter using Mach-Zehnder modulator.

This machine adopts 1550nm EML laser, microwave source phase modulation, SBS maximum 20dBm, two RF input, high isolation, built-in CWDM, multi wavelength networking, can well support QAM, IPQAM broadcast, insertion function.

It is especially suitable for all-optical transmission network with full digital TV channel. SBS 20dbm, 25km, MER > 40dB. KDPA can provide a complete solution of 1550nm EML optical transmitter + high power optical amplifier (EDFA) + FTTH ultra-low power indoor optical receiver.

2. Features

- 1GHZ frequency band, AGC, MGC modes are optional.
- SBS 13~20dbm, 0.5dB step continuously adjustable.
- SBS 20dBm,25KM,MER>40dB.
- Two-way input, isolation up to 50dB.

- Real time monitoring of laser working parameters.
- · Optional CWDM for optical insertion.
- Dual power supply, AC220V, DC48V are optional.
- Support SNMP NMS and WEB network management.

3. Technical Parameter

	Items	Unit	Technical Parameter			
	Optical wavelength	nm	1550 (ITU wavelength is optional)			
	Laser type		Electro absorption modulated laser (EML)			
Optical part	Optical connector type		FC/APC or SC/APC			
	Output optical power	mW	10	Exclude optical attenuator and CWDM insertion loss		
	External optical input power	dBm	-5∼10			
	Frequency Range	MHz	47~1003			
	RF input level	dBuV	77±5			
	Flatness in band	dB	± 0.75			
	Input return loss	dB	≥ 16			
	RF AGC control range	dB	±5			
RF part	RF MGC adjustable range	dB	0~20			
KF part	SBS	dB	13~20, 0.5dB stepping			
	RF input isolation	dB	≥ 50	Isolation between two RF inputs		
	RF input test port	dB	-20±1			
	Laser drive RF level test port	dB	-20±1			
	Electronically controlled optical	dB	≤1: attenuator 0-15dB			
	attenuator tolerance			≤3: attenuator 16-20dB		

	Maximum power consumption	W	≤15
Othoro	Operating temperature	${\mathbb C}$	-5 ~ +55
Others	Storage temperature	$^{\circ}$ C	-30 ~ +70
	Weight	Kg	5.5

4. Link performance

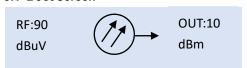

Test conditions: 50MHz ~ 860MHz, 96 channels of digital TV signal, 77dbuv / CH, QAM256, - 1dbm reception.

Fiber length / SBS	MER	BER
25KM / SBS 13dBm	≥ 40dB	< 1.0 E-9
25KM / SBS 16dBm	≥ 40dB	< 1.0 E-9
25KM / SBS 20dBm	≥ 40dB	< 1.0 E-9
50KM / SBS 13dBm	≥ 40dB	< 1.0 E-9
50KM / SBS 16dBm	≥ 39.5dB	< 1.0 E-9
50KM / SBS 20dBm	≥ 39dB	< 1.0 E-9

Note: The RF control of this machine is set to AGC mode in the factory. The AGC bias should be adjusted according to the actual number of channels in order to achieve the best performance.

5.3 Set Parameters

Set LaserOutputUnit	mW/dBm
Set BuzzerAlarm	YES/NO
Set RF ControlMode	AGC/MGC
Set MGC ATT	XX dB
Set AGC Ref	XX dB
Set OPT ATT Mode	AUTO
Set OPT ATT	XX dB
Set OPT Delta	XX dB
Set SBS	XX dB
Set Channel Number	XX
Set IP Addr	
Set Subnet Mask	
Set GateWay	
Restore Factory Config	

Optical power unit: dBm、mW are optional					
Buzzer alarm: ON, OFF are optional					
RF control mode: AGC \ MGC are optional					
MGC attenuation: 0-20 are optional					
AGC Offset: ±3dB is optional					
Set the optical power attenuation mode: AUTO Manu are optional	this menu is not visible				
Set the optical power attenuation: $0{\sim}15\text{dB}$ are optional.	without the WDM model.				
Set the difference between two optical power					
Setting SBS: 13 ~ 20 adjustable, 0.5dB step					
Set SBS, 13~20dB, 0.5dB stepping					
Number of channels: 0-100 are optional					
Set the local IP address					
Set the subnet mask					
Set gateway					

5.4 Alarm Status

RF Alarm
Laser Temp
Laser Bias
Laser TEC
Locar Output
Laser Output
+5V Alarm
13V Alailii
-5V Alarm
-VV Aluliii
+24V Alarm

Drive level alarm: The default range 80~110dBuV, can be set through the network management.

Laser temperature alarm: The default range 25±10°C, can be set through the network management.

Laser bias current alarm: The default range 20 to 90 mA, can be set through the network management.

Laser cooling current: The default range -1.5~1.5A, can be set through the network management.

Output optical power alarm: The default range 2 to 25 mW, can be set through the network management.

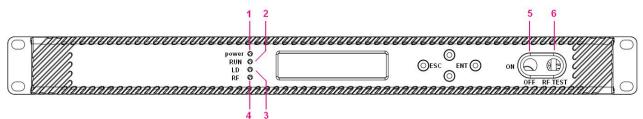

+5V alarm: The default range 5±1V, can be set through the network management.

-5V alarm: The default range -5±1V, can be set through the network management.

+24V alarm: The default range 24±2V, can be set through the network management.

6. Structure Description

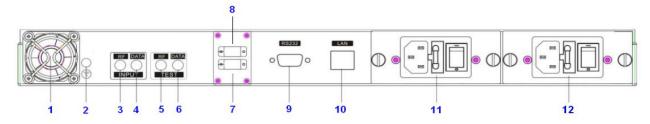

6.1 Front panel

1	Power Indicator				
2	Running indicator: 1HZ frequency flashing green when the device is working normally				
3	Laser working status indicator: Green light is always on: the laser is working normally.				
	Red light is always on: the laser is not turned on				
	Red light is flashing: The device has a parameter alarm. You can view the alarm content in the				
	Alarm Status Level 2 submenu.				
4	Laser drive level indicator: Green light is always on: drive level is normal.				
	Red light is flashing: drive level alarm. You can view the alarm content in the Alarm Status Level 2				
	submenu.				
5	Laser switch key: ON: Laser is on				
	OFF: Laser is off. Keep the laser off before the device is powered on, and turn on the laser after the power-on				
	self-test is completed.				
6	Laser drive level detection port: -20dB				

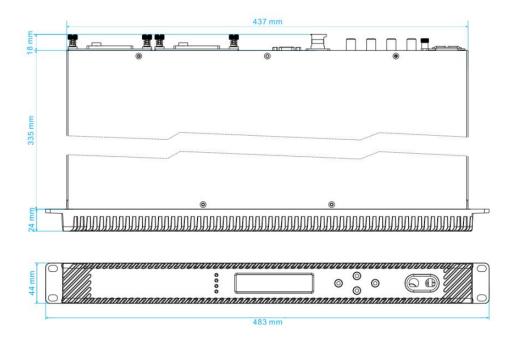

6.2 Rear panel

1	Fan	5	RF input 1 test port -20dB	9	RS232 interface
2	Ground stud	6	RF input 2 test port -20dB	10	LAN interface
3	RF input 1	7	Optical signal output	11	Power supply1, hot swappable
4	RF input 2	8	Optical signal input, there is no interface without		Power supply 2 , hot swappable
			the WDM model.		

7. Dimension

8. Attention

- Before unpacking, please confirm that the outer packaging is intact. If you think that the equipment has been damaged due to transportation, etc., do not power on to avoid more serious damage to the equipment or accidental injury to the operator.
- Before powering on the equipment, make sure that the grounding end of the chassis and power socket is reliably grounded. The grounding resistance should be $<4\Omega$, which can effectively protect against surge and static electricity.
- The optical transmitter is a professional and technical equipment. The installation and debugging must be carried out by professional technicians. Please read this manual carefully before operation to avoid damage to the equipment due to misoperation or accidental injury to the operator.
- When installing and debugging the optical device, there may be an invisible laser beam in the fiber connector. The fiber optic connector should be avoided to be aimed at the human body, even not be directly viewed by the naked eye to avoid permanent damage to body and eye!
- When the fiber connector is not in use, it should be put on the dust jacket to avoid dust pollution and keep the fiber end face clean.
