

Description

KDPA Terminal box adopt a compact and easy-to-operate design. It provides splicing and fiber splitting between FTTH drop fiber optic cable and SC or LC duplex type pigtail. The terminal box provided by KDPA can be installed in a variety of scenarios such as indoors, in corridors, on iron towers and has the advantages of strong adaptability, high reliability and multiple size options. It can be used with a variety of fiber optic connectors and is widely used in major telecom operators.

Application

- FTTX
- Telecom
- Operators LAN

Specification

- Reasonable inner space design Suitable bending radius Protect optical fiber.
- Realize FTTH (fiber to the desktop) system Dimensions: (L) 86 x (W) 86 x (D) 27mm.
- Used in FTTH indoor application, home or work area.
- Provide users with optical or data access.
- Suitable for 2pcs SC adapters.
- May store surplus fiber inside, easy for operation.
